1 Hour

VISION SCALPER

LET ME DO THE JOB

****PLEASE MAKE SURE YOU ALLOWED LIVE TRADING AND DLL IMPORT BEFORE YOU START****

The screenshot shows the 'VISION SCALPER' settings window with the 'Common' tab selected. The window is divided into three main sections: 'Common', 'Live Trading', and 'Safety'.
- In the 'Common' section, there is a dropdown menu for 'Long & Short' positions, 'Enable alerts' (checked), and 'Disable alert once hit' (unchecked).
- In the 'Live Trading' section, 'Allow live trading' is checked.
- In the 'Safety' section, 'Allow DLL imports' (checked), 'Allow import of external experts' (checked), and 'Allow modification of Signals settings' (unchecked) are listed.

Settings: (We recommend you to use the default setting)

Magic Number:

Use any lucky number.

Initial Lot:

Recommend to leave this as 0.01. If you have high balance, switch “Auto Lot” on and we’ll calculate for you.

Lot Setting:

Fixed Lot = use initial lot; Auto Lot = we’ll calculate the lot for you. Recommend to switch to Auto Lot.

Take Profit:

Take profit amount in pips. Recommend to leave this as default (30 pips). If you wanted safer & quicker exit, use lower pips like 5pips / 10pips

Trading Mode:

Stable Mode = Lesser trades open, takes longer time before a trade close in profit.

Turbo Mode = More trades open, quicker trade closes but also higher risks.

Recommend to use “Stable Mode”.

Martingale Mode:

Default is set to “true”. Please decide whether to use martingale or not depending on your balance available.

Trade Open Speed:

Slow – Accurate = Lesser but more accurate trades. (Recommended)

Moderate – Less Accurate = Moderate trade opens, quite accurate.

Fast – Least Accurate = Open trades fast, but very high risks!

Risk Mode:

3 Main mode. Please choose the one that suits you. We recommend to leave this to “No Risk Management” if you have enough balance.

1st Mode:

When lost reaches <XX>%, clear all trades, restart EA.

This mode apply to ALL CURRENCY PAIRS. When your account balance drops to <XX>%, it will clear ALL OPEN TRADES that you have.

2nd Mode:

When currencies reaches <X> addon orders, clear all that currency.

This mode apply to SPECIFIC CURRENCY PAIRS only.

Example: You have 3 currency pairs open right now, EURUSD, AUDCAD, EURJPY. My setting is “When currencies reaches 5 addon orders, clear all that currency”.

AUDCAD and EURJPY is at 2 addon orders, EURUSD is at 4 addon orders. The moment EURUSD reaches 5 addon orders, ONLY EURUSD trades will be closed, while AUDCAD and EURJPY will remain OPEN.

3rd Mode:

When currencies reaches <X> addon orders, stop adding orders.

This mode will apply to SPECIFIC CURRENCY PAIRS only.

Example: You have 3 currency pairs open right now, EURUSD, AUDCAD, EURJPY. My setting is “When currencies reaches 5 addon orders, stop adding orders”.

AUDCAD and EURJPY is at 2 addon orders, EURUSD is at 5 addon orders. The moment EURUSD reaches 5 addon orders, it WILL NOT open any more orders. It will wait for the market to recover and close in profit.

Restart EA after Stop Loss?:

This is related to the previous setting. You can choose to continue trades immediately or wait for <X> hours before starting to trade again.

Maximum Active Currency Pairs:

Number of different currency pairs you wanted to trade. Default = 28, you can set to different number according to your balance.

Currency Pairs Setting:

“All Currencies” must set to “Allow Trades” if you want to trade. Change any of the currency pairs to “Close all trades immediately, stop trading” if you want to disable that currency pair.

“Stop after profit locked” is useful when you have that particular pairs trades open.

Example: My EURUSD is open now, but I wish to close it after it makes profit. I edit the EA setting, change EURUSD to “Stop after profit locked”, so it won't open trades anymore after it's closed.
