INTRODUCTION

Welcome and thank you for taking the time to learn more about my White Walker Trading System! In this report you are going to learn how to trade a powerful system that I have been trading in secret for a very long time.

I've been a trader for many years now and the system you are about to learn is one of the techniques I personally use to trade the markets on a regular basis. In the right hands, this system can be a powerful weapon and I have no doubt that you will do as well with it as I have over the years.

The system itself is quick to learn and extremely easy to implement. Even if you are completely new to trading.

If you are new to trading, this is a great system to start trading with. I have great belief in this system because it uses a few easy to read yet powerful indicators to identify Buy and Sell opportunities. As you progress through this report, you'll see exactly what I mean.

The White Walker Trading System can be applied to all currency pairs. I personally prefer to trade the Major currency pairs and this would be a great place for you to start trading too.

You are, of course, welcome to apply the system to any other currency pairs you like as long as you are always trading the most active currency pairs during any market session. This will ensure that you are always trading the most volatile pairs at any given time.

When it comes to timeframes, I normally focus on trading this system are the 4 hour and 1 hour timeframes. In my personal experience, these timeframes usually produce the best results. However, the White Walker Trading System can be traded on all other timeframes with similar success.

In the following chapters you will learn all about the White Walker Trading System and get to see what a powerful trading tool it can be in the right hands.

I'm sure that you are excited to get started so let's dive right in!

OVERVIEW OF THE SYSTEM

The White Walker Trading System uses three custom made indicators:

- **WW_Arrows**
- **WW_Line**
- **WW_Histogram**

The WW_Arrows indicator is placed on the chart, while WW_Line and WW_Histogram have their own windows at the bottom of the chart.

For a valid trade entry, all three indicators must align and give a proper signal.

Here's what your chart will look like after installing the indicators and the White Walker Trading System template (indicators and template come with an autoinstaller, making it easy and painless to install):

Image 1: White Walker Trading System on chart

WW_Arrows

WW_Arrows is an indicator that relies on the logic of the Exponential Moving Average. The upwards arrow signals a potential buy trade, while a downwards arrow signals a potential sell trade.

When searching for a trade, this is the first indicator you'll look at. After the arrow has appeared and all other indicators aligned as well, only then will you take the trade.

Once the arrow appeared and you took the trade, you can enter the next trade only when the next arrow appears.

Image 2: WW_Arrows

WW_Line

WW_Line is a custom trend-following momentum indicator that is calculated by subtracting the long-term EMA (estimated moving average) from the short-term EMA. It triggers buy signals when it crosses above the zero line (**blue**) or sell signals when it crosses below the zero line (**red**).

Image 3: WW_Line

WW_Histogram

WW_Histogram displays the **neutral (white)**, **buy (blue)** or **sell (red)** opportunities. It is designed to identify convergence, divergence, and crossovers.

Image 4: WW_Histogram

BUY RULES

1. **Upwards White Walker arrow** must appear on the chart
2. **WW Line** must **cross above 0 level** and turn **blue**
3. **WW Histogram** must become **blue**
4. Once all the conditions have been met, **enter the buy/long trade** at the **close of the candle**
5. Place your **Stop Loss** below the most recent swing low point
6. Place your **Take Profit** the same distance from the Entry point as your Stop Loss (1:1 Risk To Reward ratio)

Note: After the WW_Arrow has appeared, the other two indicators must align within the next three candles. If not, we won't consider it as a valid signal anymore.

Image 5: Buy Trade Rules

SELL RULES

1. **Downwards White Walker arrow** must appear on the chart
2. **WW Line** must **cross below 0 level** and turn **red**
3. **WW Histogram** must become **red**
4. Once all the conditions have been met, **enter the sell/short trade at the close of the candle**
5. Place your **Stop Loss** above the most recent swing high point
6. Place your **Take Profit** the same distance from the Entry point as your Stop Loss (1:1 Risk To Reward ratio)

Note: After the WW_Arrow has appeared, the other two indicators must align within the next three candles. If not, we won't consider it as a valid signal anymore.

Image 6: Sell Trade Rules

BUY EXAMPLE

In this Buy trade example, I was looking for trades on the USDJPY currency pair, H1 timeframe.

First of all, I waited for the upward WW_Arrow to appear on the chart (1). Once the arrow appeared, I knew I could start looking for a trade signal within next 3 candles.

The next two conditions for entering a trade occurred on the next candle. The WW_Line crossed above zero and turned blue (2), while the WW_Histogram changed its color to blue as well (3).

As soon as the candle where all the conditions were met closed, I entered a Buy trade (4). My Stop Loss was placed few pips below the most recent swing low (5) and my Take Profit was set at 1:1 Risk to reward ratio (6).

The trade played out in my favor and it was a really nice, clean, and profitable trade.

Image 7: Buy Trade Example

SELL EXAMPLE

For this Sell trade example, I was on the lower time frame (M15) and my currency pair was AUDUSD.

First of all, I waited for the downward WW_Arrow to appear on the chart (1). Once the arrow appeared, I knew I could start looking for a trade signal within next 3 candles.

Two candles after the WW_Arrow has appeared, the WW_Line crossed below zero and turned red (2), while the WW_Histogram changed its color to red as well (3).

As soon as the candle where all the conditions were met closed, I entered a Sell trade (4). My Stop Loss was placed few pips above the most recent swing high (5) and my Take Profit was set at 1:1 Risk to reward ratio (6).

The price went in the direction I expected (with a small pullback) and hit my Take Profit, making it another profitable trade using the White Walker Trading System.

CONCLUSION

In conclusion, I would like to share a few powerful tips that will help you get the most out of trading the White Walker system and give you the very best results.

Like I mentioned earlier, the system can be applied to all timeframes and currency pairs with equal success, but I personally prefer to trade it on the following pairs as they tend to perform the best for me.

It might be different for you, and that's all right, but I'm sure you're curious to know the pairs that I trade so here they are: EURUSD, GBPUSD, USDCHF, USDJPY, AUDUSD, USDCAD, EURJPY and GBPJPY.

Remember to tighten your Stop Losses around High Impact News Releases or avoid trading at least 15 minutes before and after these events.

I have also found that the best results can be achieved on the 15 Min timeframe and the 1 Hour timeframe.

This system has served me very well and I know that you will enjoy trading it too. If you can follow the rules and these simple guidelines you are well on your way to success as a trader.

I wish you the very best in all your trading endeavors.
